

Entering a new chamber, you find a dusty and slightly damaged old notebook and map half buried under some rubble. These materials seem to describe and chart a set of streams.

With some work, you're able to chart the course of each stream on the map. What feeds this complex of streams?

1. The Notebook

The notebook contains *a description of each stream*, though a few words are not legible due to the damage. A second author has scribbled *a note beneath each description*, but those seem alternately irrelevant and garbled.

This is the first of \mathbb{N} streams, and they cross \mathbb{N} -1 times (I used [illegible] to f sorry, some of this is a garble	igure this out). [_]
I noticed the banks of this stream were extremely dry. I was surprised by their [ill fresh and tidy air	legible]. [_]
Here we were startled by a wild pig with large tusks. I put up a sign saying "[ille warning to future explorersseems to be an "orb" web area	egible] [illegible]" as a
The noise of our electronic equipment may be disturbing the wildlife. I asked the cre messy notes; edit at cave	w to [illegible] it all .
This stream is positively bursting with Ranidae. It's the $[illegible]$ stream $I've$ next time $I'll$ get a forest gig	ever seen.
Alongside this stream is the ruins of a $[illegible]$, once used to store wheat orone small jaguar and Gary ran	oats.
Here two of my crew almost got stuck in quickṣand; I had to [illegible] [il don't forget to measure the PH, Mel	legible] <i>escape</i> . [_]
This stream is beautiful; I think it was [illegible] [illegible] of all of t is this really the remains of a moat? Verify	ehem.
A steep climb to reach the start of this stream. My crew was carrying a lot of equipmento [illegible] themselves righto, mind the vortex 'ere	ment and I had to remind them not
I was surprised by the [illegible] of vegetation around this stream; I only saw join the party, sis	o an occasional bush.
This area was more of a bog than a stream, though it was full of freshwater fish; I on " [illegible] [illegible] " blindly trust map? Ow!	call it the
_	

Considering the entries from a different perspective, they might very well signal some information that would help chart the course of those streams:

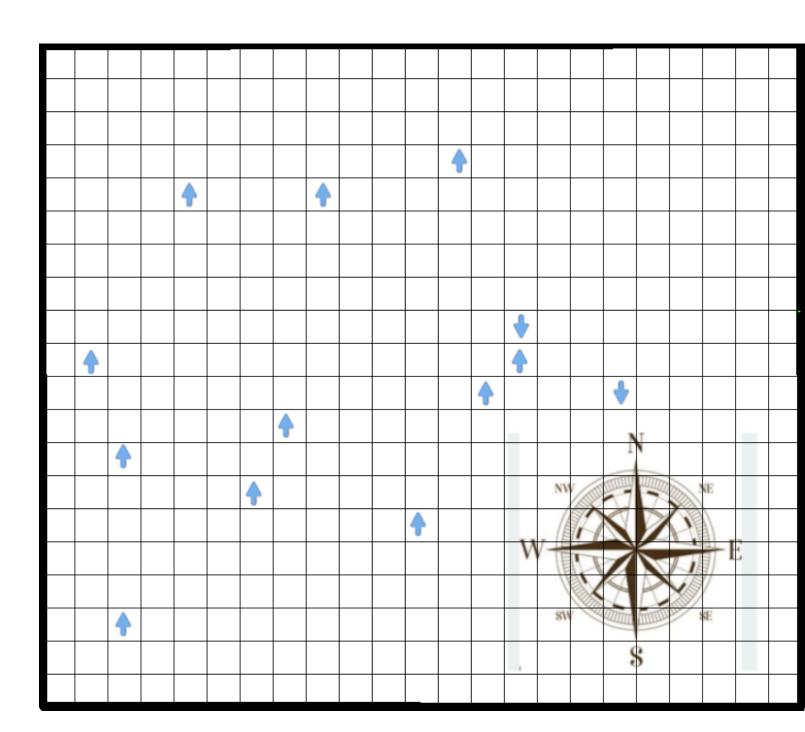

___ ___

2. The Map

The map also seems to include some helpful information - though most of the blue down arrows seem to have faded away.

Field observations regarding streams:

- Each stream bubbles up from the ground from a particular location (marked with a blue up arrow) and sinks back into the ground at a separate location (marked with a blue down arrow).
- No stream ends to the West of where it begins.
- Streams only flow in the eight compass directions (N, NE, E, SE, S, SW, W, and NW)
- Almost every stream changes direction, once, at a particular point in that particular stream.
- Every stream crosses at least one other stream; most streams cross two other streams.
